DNL -
Why did not call
twice as per CFC
instr?

MEMORANDUM FOR: Director, NPIC

CCL

FROM:

SUBJECT:

STATINTL

1. As a reminder of our discussion on 13 June, it would be desirable to have a meeting with [redacted] and the undersigned in your office on Thursday, 22 June, to decide some of the problems in connection with this lens.

2. These problems are ones which have not been considered thus far in the development of this lens. They are:

STATINTL

- a. Proper Shutter - This lens requires a different shutter than the one presently in use on the [redacted] Reduction Printer.
- b. Proper Light Source, tailored to the lens design and to the emulsion required for use on the printer, SO 278, presently in use on the [redacted] printer is not capable of carrying the resolution of this lens.
- c. A decision must be made as to whether the lens should be mounted on the bed of the [redacted] Reduction Printer or whether a new simple I beam optical bench should be constructed to carry the lens, thus preserving the present printer and saving much redesigning of the present printer to carry the new lens.

STATINTL

STATINTL

3. It can be seen by reviewing the above that this new lens will necessitate the expenditure of additional money no matter which decisions are made. Therefore, these decisions should be made as soon as possible in order to prevent the forming of hasty decisions at a later date.
